

ECR International is changing the shade of gray color on all Olsen gas and oil furnaces. With this color change all furnace panels will be manufactured using pre-painted steel.

***Current Color**

***New Color**

* Due to the color reproduction variations in computer monitors and print, the above color samples are the best representation of the furnace colors. The samples above give the best representation of the contrast between the two colors. The colors may not be exactly as shown.

When will the new color be used in manufacturing?

The first product to receive the color change will be gas furnaces. Gas furnace production with the new color will start immediately. To assist in the transition of manufacturing facilities, ECR has pre-built a large inventory of oil furnace cabinets. The oil furnace color change will begin in the 4th quarter of 2009.

I have additional questions?

Please contact your ECR Representative.
